

Reflections on the Project Work

1. Challenges

- **Backend Issues**

- The Swagger documentation as if did not match the schema we made and our entities can lead to errors.

- **Frontend and Backend integration**

- As there was different people working for the front and the back so focusing on taking the write host numbers to prevent any errors was challenging.

2. What Went Wrong

- Dividing the work and leak of communication that lead to leakage in the work performance.

- The integration between the front and the back did not work due to some errors that we did not solve.

3. Improvements for Next Time

- Commitment to the work distributed on the team as everyone must finish their task in time.

- The communication must be improved as in the next time we will set times for meetings every week to see the progress of the team work.
